

# Gutter Protection *even when it rains cats and dogs.*™

*"We have lots of mature trees in our yard. We had The Hurricane Leaf Protector installed when we bought our house and never had to worry about clogged gutters again."*

*-John & Nicole, Washington*

# Gutter Protection

*even when it rains cats and dogs.*™

The Hurricane Leaf Protector, offered exclusively through ABC Seamless, is one of the most powerful tools for protection against leaves and debris in your gutters.

If you're tired of repeatedly scooping out the sludge from leaves and other debris that clog your gutters, there is a solution.

The Hurricane Leaf Protector fits securely on your gutter system allowing rainwater to flow naturally through the "perforated eyes" of The Hurricane and into the gutter, flushing away the debris. And it's durable---made from the same steel and is available in the same colors as our siding and gutters.

## How does the Hurricane Leaf Protector Work?

The Hurricane Leaf Protector siphons the rainwater directly into your gutter. It draws the rainwater through the "thousands of eyes" that make up a complete installation. The stronger the rains, the harder the Hurricane Leaf Protector works. The "eyes" in the Hurricane cover steer the water into the gutter trough,

through the downspout and away from your home. It's state-of-the art design does all the work so you don't have to. The lip at the front of the Hurricane cover fits snugly into your gutter system giving you extra strength and support.

## Low Maintenance

The "perforated eyes" create a more rigid and stronger Hurricane gutter cover. It's made from steel, the same as ABC Seamless siding and gutters, making it one of the most durable gutter protection systems made today. Your neighbors won't even know you have the Hurricane because its attractive and sleek design complements your house. While other leaf protectors detract from the house because they are so noticeable and stick up high above the gutter, The Hurricane's sleek and low-profile appearance makes it an ideal leaf protection system.
